

5 METHODS OF ADMINISTERING AN AMPA RECEPTOR ANTAGONIST TO TREAT
 DYSKINESIAS ASSOCIATED WITH DOPAMINE AGONIST THERAPY

ABSTRACT

 The invention relates to a method of treating dyskinesias associated with dopamine
agonist therapy in a mammal which comprises administering to said mammal an effective
10 amount of an antagonist of the AMPA receptor. Dopamine agonist therapy, as referred to in the
present invention, is generally used in the treatment of a central nervous system disorder such
as Parkinson's disease.
